IN THE CLAIMS

1. (currently amended) A substantially pure Type II restriction endonuclease obtainable from Bacillus thermoglucosidasius 36A (ATCC Accession No. <u>PTA-5292</u>) recognizing the following base sequence in double-stranded deoxyribonucleic acid molecules:

5'-GCGATGNNNNNNNNNNNO-3' (SEQ ID NO:9)

3'-CGCTACNNNNNNNNNNNNN+-5'

and having a cleavage position defined by the arrows

- 2. (original) A method for obtaining the Type II restriction endonuclease of claim 2, comprising cultivating a sample of Bacillus thermoglucosidasius 36A under conditions favoring the production of said endonuclease and separating said endonuclease therefrom.
- 3. (currently amended) The Type II restriction endonuclease of claim 1, wherein the restriction endonuclease is purified from Bacillus thermoglucosidasius 36A (ATCC Accession No. <u>PTA-5292</u>).
